BE ADVISED:

AN EAA NEWSLETTER

PRESIDENTIAL GARF

The Waco wings were stripped at one of our Saturday work sessions. Bill Gobel showed us his stuff with a pencil (That way he didn't have to get his hands dirty.) and drew a workable diagram for the rebuilding of the wings. It looks like we may need to build some ribs and do an extensive amount of sandblasting on the framework very shortly.

The Luscombe wings are ready for paint. This has been a long project and thanks to all those who participated and especially Hank and Lou's supervision, it looks like it may finally pay off.

We are pleased at the recent growth in our new chapter. New members are:

Hurley Broach	273-3751
Keith Muskgrove	273-1706
Bob Myer	367-7230

We are very pleased to have gained people with such a high degree of experience and/or enthusiasm.

We had our last meeting at the CAP Headquarters Building and have voted to make it our permanent home. It looks like this will work out very well for us and the CAP seems glad to have us. Maybe we can give some support to these young people in their endeavors?

I personally see a good relationship forming soon. We may also have facilities for a local E.A.A. library here, which would give us a reference area centrally located.

Our next meeting is June 7 at 10:00. See you there.
